1. Description

The MSC2 8-band near infrared multispectral camera incorporates a high performance 4MP CMOS sensor that is modified with Spectral Devices proprietary multispectral filter array technology. This miniature multispectral snapshot camera simultaneously captures images at 8 distinct bands at 89 frames per second in full frame mode. There is no requirement for additional filters, filter wheels, or tunable filters. The spectral information in the 8 bands is captured simultaneously by the multispectral sensor. The camera offers 8 bands of spectral discrimination spaced between 700 nm and 1000 nm. The camera is USB3 Vision-compliant with many pre-built software options such as 2ndlook graphical camera software. Programmers can build camera applications in Windows and Linux using the included SDKs. Power is supplied through the USB3 interface. The MSC2-NIR-1-A is ultra-compact, ultra-light, and designed for demanding near infrared imaging applications.

2. Key Features

Snapshot Operation (capture spectral images simultaneously) Captures 8 Bands (720, 760, 800, 840, 860, 900, 940, 980 nm) Anti-X-Talk™ Technology (enhances contrast and spectral performance) High Frame Rate (up to 89 FPS at full frame) High Performance (4MP Global Shutter CMOS Sensor) USB3 Vision & GenICam Compliant Ultracompact (28 mm x 28 mm x 47 mm) Ultralight (< 55 g) Low Power Requirement (< 4W from USB cable) Multiple M2 and M4 Mounting Points SDK for Windows and Linux included

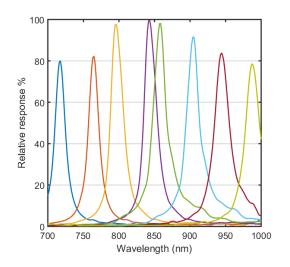

3. Applications

The camera is suitable for applications such as remote sensing for agriculture and geological surveys, close examination of artwork, biomedical imaging, robotics, and automation. Combined with Spectral Devices SBC-1 miniature vision computer, the MSC2-NIR8-1-A offers an easy-to-use lightweight and modular imaging solution for UAV users.

4. Spectral Characteristics

Spectral response of the filter set and sensor

5. Anti-X-Talk[™] Technology

Unique to Spectral Devices is an on-chip technology we refer to as Anti-X-Talk[™] technology. Anti-X-Talk[™] technology works at the filter level and prevents light leakage between individual filters. Without Anti-X-Talk[™] technology, stray light between spectral channels is significant, often exceeding the light leakage due to spectral overlap between adjacent filters. Without Anti-X-Talk[™] technology, images suffer from low contrast and spectral ambiguity. Spectral Devices invented Anti-X-Talk[™] technology to overcome these problems. It works by blocking stray light between adjacent filters, so the pixel response is predictable and directly related to the actual spectral response of the overlying pixelated filter. The result is multispectral images with better spectral discrimination and higher contrast. Furthermore, high quality image data from the MSC2-NIR-1-A can be used as is without the need for proprietary post-processing algorithms and the camera can be used with a wide range of lens types, even at large apertures (e.g., f/2).

6. Specifications

Lens Mount	C-mount
Sensor Type	CMOS
Sensor Model	AMS CMV4000
Sensor Format	1-inch
Number of Spectral Channels	8
Image Pixels Per Spectral Channel	256 x 256 (512 x 512 after debayering)
Effective Pixel Size (H x V)	16.5 μm x 5.5 μm
Capture Method	Area
Spectral Channels	720, 760, 800, 840, 860, 900, 940, 980 nm
Spectral Bandwidth (FWHM)	20 nm
On-chip Spectral Enhancement	Anti-X-Talk™ Technology
Shutter Type	Global
Sync System	External trigger (Hardware, Software) / Free run
Maximum Frame Rate	8bits output 89 fps
(at Full Frame)	10bits output 45 fps
	12bits output 37 fps
ADC bit width	10bits / 12bits
Video Format	8bits / 10bits / 12bits output
	(Support packed on 10bits / 12bits)
Noise Level	8bits output: <3 digits (Gain 0 dB)
	10bits output: <12 digits (Gain 0 dB)
	12bits output: <48 digits (Gain 0 dB)
Sensitivity (*1)	210 Lux
Exposure time	22 μs to 16.77 seconds
	(Default: 11,116.0 μs)
Digital Gain	0 to 13.9 dB (Default: 0 dB)
Black Level	8bits output: 0 to 15 digits
	10bits output: 0 to 63 digits
	12bits output: 0 to 255 digits
ROI	Horizontal: 32 to 2,048 pixels
	Vertical: 32 to 2,048 lines
	(Default: 2,048 x 2,048)
	Adjustable Steps for size: 16 pixels in horizontal direction /
	4 lines in vertical direction
	Adjustable Steps for offset: 2 pixels in horizontal direction /
	2 lines in vertical direction
Multi ROIs (*2)	8 regions (Default: 1 region)
Binning	Turned off for multispectral readout
Decimation	Turned off for multispectral readout
HDR	Turned off for multispectral readout
Image Flip	Horizontal / Vertical / Horizontal and Vertical / Off
Defective Pixel Correction	Turned off for multispectral readout
Auto Exposure	Supported

Supported
Edge preset Trigger / Pulse width Trigger / Start Stop
Trigger / Free run
Supported
Through USB3.0 bus
USB3.0 Super speed (USB3.0 micro B)
USB3 Vision [®] 1.0.1, GenICam Standard Version (SFNC 2.2, PFNC 2.0) compliant
Three GPIOs, One Camera Hardware Reset
+5V (typ.) (This conforms to USB standard)
Less than 4.0 W
Anodized Aluminum
4 x M4 (bottom), 2 x M4 (top), 3 x M2 (4 sides)
28 mm x 28 mm x 47 mm (W x H x L)
< 55 g
Minimum Environmental Temperature: 0 deg. C,
Environmental Humidity: 0 to 85 %RH (No condensation) Maximum Camera housing temperature (top plate) shall not exceed 55 deg. C
Environmental Temperature: -30 to +65 deg. C
Environmental Humidity: 0 to 85 %RH (No condensation)
20 Hz to 200 Hz to 20 Hz (5 min. / cycle), acceleration 10 G,
XYZ 3 directions 30 min. each
38 G, half amplitude 6 ms, XYZ 3 directions 3 times each
EMS: EN61000-6-2, EMI: EN55011
RoHS Compliant

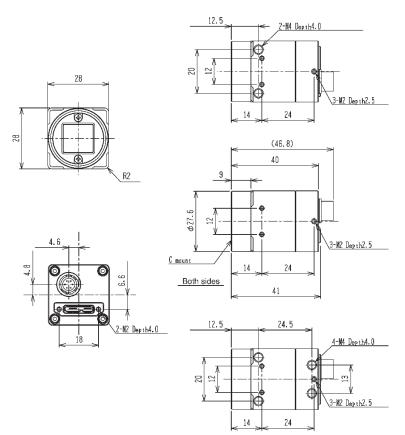

(*1) The sensitivity was measured as the luminance when white level achieved 100 % using the settings and conditions below with no multispectral filter array.

Camera Setting		Environment		
Parameter	Setting	Parameter	Setting	
Gain Up	0 dB	Light Source	Light Box (White)	
AGC	Off	Color temperature	5,100K	
White Balance	Optimum	Lens		
Electrical Shutter	1/30 seconds	F on Lens	F5.6	
Black Level	Optimum	Target Luminance	IM-600 (Topcon)	
Gamma	Factory Setting			

(*2) The multiple ROI regions cannot set on the same horizontal line.

9. SDKs

Included with the MSC2-NIR8-1-A is an industrial-grade SDK for camera control and image capture. The SDK is compatible with variety of Windows, Linux and MacOS operating systems. It includes drivers, libraries, documentation, and samples. Environments such as Python and OpenCV are also supported.

Operating System	Development Environments	SDK Includes
Windows 10 (32bit / 64bit) Windows 8.1 (32bit / 64bit) Windows 7 SP1 (32bit / 64bit)	Visual Studio 6 Visual Studio 2003 Visual Studio 2005 Visual Studio 2008 Visual Studio 2010 Visual Studio 2012 Visual Studio 2013 Visual Studio 2015 MinGW (Minimalist GNU for Windows) embarcadero Free C++ Compiler Python 3.6.x Python 3.7.x	Windows driver Windows SDK StApi (Visual C++, .net Framework 2.0, C) StGenTL module Viewing Software (StViewer) Sample Programs (Visual C++, Visual C#, Visual Basic, C) DirectShow Filter Documentation
Ubuntu 18.04 (64bit) Ubuntu 18.04 (ARM 64bit) Raspberry Pi OS (32bit)	Python 3.6.x Python 3.7.x	StApi (C++, C) StGenTL module Viewing Software (StViewer) Sample Programs (C++, C) Documentation
MacOSX Sierra MacOSX High Sierra MacOSX Catalina	Python 3.6.x Python 3.7.x	StApi (C++) StGenTL module Viewing Software (StViewer) Sample Programs Documentation

10. Windows Software (optional)

2ndLook is a complete image acquisition software package that enables users to connect and acquire images from one or more multispectral cameras on a single PC. Offers real-time synchronized video recording from GenICam-compliant USB3 Vision, GigE Vision, and DirectShow cameras (Figure 10.1). Easily record directly to popular file formats such as AVI and TIFF. Record from multiple cameras to different file formats concurrently. Multispectral imaging conversion filters for Spectral Devices cameras are built in (Figure 10.2). View montage of spectral images in real-time (Figure 10.3). Easy to use interface with interactive help and user guides. Demo version provides all features, except save to disk function.
